Total Breaches: 1,579

Records Exposed: 178,955,069

The ITRC Breach database is updated on a daily basis, and published to our website on each Tuesday. Unless noted otherwise, each report includes U.S. breaches that occurred in the year of the report name (such as "2017 Breach List"), or became public in the report name year, but were not public in the previous year. For any breach which may have a corporate office outside of the U.S., but has customers in the U.S., the breach location will be identified as U.S. Each item must be previously published by a credible source, such as Attorney General's website, TV, radio, press, etc. The item will not be included at all if ITRC is not certain that the source is real and credible. We include in each item a link or source of the article, and the information presented by that article. Many times, we have attributions from a multitude of media sources and media outlets. ITRC sticks to the facts as reported, and does not add or subtract from the previously published information. When the number of exposed records is not reported, we note that fact. Note: For data breach incidents involving only emails, user names, and/or passwords, the number of records are not included in the overall total number of records.

What is a breach? A breach is defined as an event in which an individual's name plus Social Security Number (SSN), driver's license number, medical record, or a financial record/credit/debit card is potentially put at risk – either in electronic or paper format.

The ITRC Breach Report presents individual information about data exposure events and running totals for the year. The ITRC Breach Stats Report develops some statistics based upon the type of entity involved in the data exposure.
