ITRC Breach Stats Report Summary	5
ITRC Breach Stats Report	6
ITRC Breach Report	33

The ITRC Data Breach Report is sponsored by:

CyberScout delivers a comprehensive suite of breach mitigation and identity management solutions to empower you to:

- Reduce your risk of a data breach occuring
- React swiftly and appropriately in the event a breach happens
- Manage the reputation of your organization and of those affected by the breach

Visit www.CyberScout.com or call 888.682.5911 today to learn more.

Identity Theft Resource Center would like to thank CyberScout for their continued financial support.

Information and Background on ITRC

Information management is critically important to all of us - as employees and consumers. For that reason, the Identity Theft Resource Center has been tracking security breaches since 2005, looking for patterns, new trends and any information that may better help us to educate consumers and businesses on the need for understanding the value of protecting personal identifying information.

What is a breach? The ITRC defines a data breach as an incident in which an individual name plus a Social Security number, driver's license number, medical record or financial record (credit/ debit cards included) is potentially put at risk because of exposure. This exposure can occur either electronically or in paper format. The ITRC will also capture breaches that do not, by the nature of the incident, trigger data breach notification laws. Generally, these breaches consist of the exposure of user names, emails and passwords without involving sensitive personal identifying information. These breach incidents will be included by name but *without* the total number of records exposed in the cumulative annual total.

There are currently two ITRC breach reports which are updated and posted on-line on a weekly basis. The *ITRC Breach Report* presents detailed information about data exposure events along with running totals for a specific year. Breaches are broken down into five categories, as follows: business, banking/credit/financial, educational, Government/Military and medical/healthcare. The *ITRC Breach Stats Report* provides a summary of this information by category. Other more detailed reports may be generated on a quarterly basis or as dictated by trends.

It should be noted that data breaches are not all alike. Security breaches can be broken down into a number of additional sub-categories by what happened and what information (data) was exposed. What they all have in common is they usually contain personal identifying information (PII) in a format easily read by thieves, in other words, not encrypted.

The ITRC currently tracks seven categories of data loss methods: Insider Theft, Hacking (which includes Spearphishing, Ransomware, and Skimming), Data on the Move, Employee error/ Negligence/Improper disposal/Lost, Accidental web/Internet Exposure, Physical Theft and Unauthorized Access. (Please note that Accidental email, previously included with Accidental web/Internet Exposure, has been re-categorized under the Employee error/Negligence/Improper disposal/Lost category.) Subcontractor/Third Party/BA is included here but is combined with one of the above. In these, as well as some other breaches, there may be more than one category checked.

The ITRC breach list also tracks types of information compromised:

- Social Security number
- Credit/Debit Card number
- Protected Health Information (PHI)
- DMV Records
- Financial Accounts
- Email/Password/User Name
- Other/Undefined Type of Records

Methodology

The ITRC breach list is a compilation of data breaches confirmed by various media sources or notification lists from state governmental agencies. This list is updated daily, and published each Tuesday.

Breaches on this list typically have exposed information which could potentially lead to identity theft, including Social Security numbers, financial account information, or medical information. ITRC follows U.S. Federal guidelines about what combination of personal information comprise a unique individual, and the exposure of which will constitute a data breach.

Records Reported:

This field has been changed to more accurately reflect the circumstances surrounding the number of records exposed. The numeral "0" has been replaced with "Unknown" - recognizing the number of records may have been reported to some other entity (i.e. government or law enforcement), but is not provided in the information available to the ITRC.

Breach categories:

Business: This category encompasses retail services, hospitality and tourism, professional, trade, transportation, utilities, payment processors and other entities not included in the other four sectors. It also includes nonprofit organizations, industry associations, non-government social service providers, as well as life insurance companies and insurance brokers (non-medical).

Educational: Any public or private educational facility, from pre-school through university level. This category does not include scholarship providers, after school entities, or tutoring organizations.

Medical/Healthcare: Any medical covered entity (CE) or business associate (BA), as defined by HIPAA, in the healthcare industry. Also includes healthcare facilities and organizations which may be attached to schools and universities, and *may* include pharmaceutical manufacturers. Insurance companies may vary by industry – medical and long term insurance providers will be classified as medical healthcare. (Included on hhs.gov list).

Covered entities are defined in the HIPAA rules as (1) health plans, (2) health care clearinghouses, and (3) health care providers who electronically transmit any health information in connection with transactions for which HHS has adopted standards. A "business associate" is a person or entity that performs certain functions or activities that involve the use or disclosure of protected health information on behalf of, or provides services to, a covered entity.

Government/Military: Any city, county, state, national or military entity; or a department within one of these entities. In the event that a medical facility is also a government or military entity, it will be listed under Government/Military. Entities such as Veteran Association Medical Centers (VAMC) will be included in this sector.

Banking/Credit/Financial: This sector includes entities such as banks, credit unions, credit card companies, mortgage and loan brokers, financial services, investment firms and trust companies, payday lenders and pension funds (401 savings plans)

Identity Theft Resource Center CYBERSC

2018 - Data Breach Category Summary

The Identity Theft Resource Center breach database is updated daily and published to our website weekly. A US-based breach, as identified by our current process, is considered public when one of these occur:

1) Published by a credible source (sources include Offices of the Attorney General, and established media - TV news, radio, newspapers)

2) A letter notifying a potential victim has been received

ITRC will provide attribution of the source and include the relevant data to the extent that has been made public in our findings. If the number of records is not made publicly available, ITRC will note that in the report as "unknown" indicating we do not have the specifics of the actual number impacted. Identity Theft Resource Center reserves the right to make an educated estimate to the potential of impact based on our knowledge and understanding of the specifics of the policies of the reporting entity.

The ITRC would like to thank CyberScout for its financial support of the ITRC Breach Report, ITRC Breach Stats Report and all supplemental breach reports.

ITRC20180626-01	Michigan Medicine	MI	6/25/2018	Electronic	Medical/Healthcare	Yes - Published #	871

On June 3, 2018, a Michigan Medicine employee's personal laptop computer was stolen. The theft occurred when the employee's car was broken into and his bag, which contained the laptop, was stolen. The data stored on the laptop varied based on the research studies, but could have included patient names, birthdates, medical record number, gender, race, diagnosis and other treatment-related information.

We are writing to inform you that we have been in contact with the IRS because some of our clients received a letter from the Internal Revenue Service asking to verify their identity. We have confirmed with the IRS that returns being filed by our clients are not being monitored, and that clients who received this letter filed tax returns matching certain criteria used by the IRS in the identity verification process.

Although Systeme has no information to suggest that any unauthorized individual acquired access to that server, Systeme later determined that Google's search engine "crawled" the server, making the documents searchable for a brief period of time. After reviewing the files that were on the server at issue, we have determined that the information contained on the "results files" may have consisted of individual names, and in some cases individuals' addresses, telephone numbers and/or Social Security numbers.

Working with third-party forensic investigators to confirm the nature and scope of the incident, on January 23, 2018, Rotary learned that several employee email accounts were subject to unauthorized logins by an unknown actor beginning in June 2017. The review of the accessible emails determined that the following types of information related to you may have been contained in the accessible emails: name, Social Security number, financial account / routing number, passport number, tax identification number, driver's license number, username/password, and medical/health insurance information. (Exposure number per IN AG's Office)

As a result, I am writing to inform you that Connexus was recently the target of an email phishing incident resulting in unauthorized access to three (3) employee email accounts. The personal information included your full name, Social Security number, driver's license number, and financial account number.

More than 200,000 patients' records were exposed on MedEvolve's public FTP server. One of the two clients where no password or protection was deployed was Premier Urgent Care in Exton, Pennsylvania. More than 11,000 of the records reportedly included Social Security numbers. A second MedEvolve client with exposed patient information was Dr. Beverly Held, a dermatologist in Corpus Christi, Texas. The researcher estimated that there were about 12,000 Social Security numbers exposed in the files.

Swenson, Saurer, Gerber, MN 3/6/2018 Electronic Business Yes - Published # Anderson & Co., Ltd. In February, 2018, our Firm became aware that an unauthorized third party may have gained access to your 2015 tax infor your first and last name, address, Social Security number ("SSN") and compensation information as well as possibly your information if direct deposit/direct payment was utilized. (Exposure number per IN AG's office) Publication: NH AG'soffice / NY AG's office Author: Article URL: https://www.doj.nh.gov/consumer/security-breaches/documents/swenson-saurer-20180306.pdf Company or Agency State Published Date Breach Type Breach Category Records Exposed? Laufer Group International NY 2/27/20

On March 2, 2018, we learned that the USB drive was lost or destroyed in transit to DAL and that the USB drive was not encrypted or password-protected. These files included your name, address, Social Security number, income and withholding information and in some cases, garnishment information. In some specific cases, the information lost also included bank account information, but not bank account passcodes or access codes.

On or around December 23, 2017, we learned of suspicious activity related to our e-commerce website. We immediately commenced an investigation and determined that our e-commerce site was infected with a suspicious code. The investigation has confirmed the following information could be collected by the malicious code: name, address, card number, expiration date, and CVV. (Exposure number per NC AG's office)

The preliminary findings of the digital forensics investigation confirmed that your payment card information may have been acquired without authorization. Payment cards used by customers on Chopra's e-commerce website may have been involved in this data security incident. The affected payment card information may have included names, card numbers, expiration dates, and security codes. (Exposure number per NC AG's office)

ITRC20180216-07	Etsy	NY	2/15/2018	Electronic	Business	Yes - Published #	1,566

Etsy confirmed a privacy breach impacted about 1,500 sellers. The incident was caused by human error and was not related to any hacking or website vulnerability. The form contains the tax identification number (TIN) of the payer (in this case Etsy) and the payee (in this case, sellers). In some cases, sellers (particularly low-volume sellers) use their social security number as their TIN. We have a follow-up question in to Etsy about whether it used the full social security number on 2016 forms, or just the last 4 digits. (Number of Records exposed per NY AG's office)

The intrusion and accompanying data breach was discovered on or about December 18, 2017, following the discovery of suspicious code on Makeup Geek's website. After forensic analysis, it was determined that a computer hacker had managed to insert a hidden piece of malicious code into Makeup Geek's customer-facing web portal, which was able to intercept customer credit card information as it was being entered by the customer by means of a form of keystroke logging. (Number of Records exposed per NY AG's office)

Along with a bevy of personal information contained in documents that, according to a statement on the website, was intended to be public, the Kansas Secretary of State's website left exposed the last four digits of Social Security numbers (SSN4) belonging to numerous current and former candidates for office, as well as thousands—potentially tens of thousands—of high-ranking state employees at virtually ever Kansas government agency.

	On November 14, 2017, we investigation determined the of the impacted e-mail account of the impacted e-mail account of the impact of the impac	at an unauth	orized user appea	red to have gaine	ed access to email accou	unts of three employee	s. A detailed review

investigation determined that an unauthorized user appeared to have gained access to email accounts of three employees. A detailed review of the impacted e-mail accounts was performed and on January 8, 2018, we determined that the emails in those e-mail accounts contained your name and Social Security number and may have potentially contained your address, medication and clinical information, and health insurance information.

On or about August 3, 2017, certain Broward College employees received a spam phishing email to their Broward College email accounts. Broward College also immediately initiated an investigation, with the assistance of a third-party forensic investigator, to determine what personal information, if any, was subject to unauthorized access or acquisition. Type of information exposed was not dislosed. (Number of Records exposed per NC AG's office)

The Identity Theft Resource Center breach database is updated daily and published to our website weekly. A US-based breach, as identified by our current process, is considered public when one of these occur:

1) Published by a credible source (Sources include Offices of the Attorney General, and established media – TV news, radio, newspapers)

2) A letter notifying a potential victim has been received

2018 Breaches Identified by the ITRC as of:

ITRC will provide attribution of the source and include the relevant data to the extent that has been made public in our findings. If the number of records is not made publicly available, ITRC will note that in the report as "unknown" indicating we do not have the specifics of the actual number impacted. Identity Theft Resource Center reserves the right to make an educated estimate to the potential of impact based on our knowledge and understanding of the specifics of the policies of the reporting entity..

• The ITRC would like to thank CyberScout for its financial support of the ITRC Breach Report, ITRC Breach Stats Report and all supplemental breach reports.
